Key Concepts

**Key Concepts Explanation** X1/X2 ХЗ General explanation

This transparency template is compliant with the requirements in CRR 129(7) and is used with ECBC labelled covered bonds issues by the three issuer categories below.

Mandatory tables
Please note that not all tables are applicable to each issuer type and that some information is optional. Information on applicability is given below and where relevant in connection with the tables in the template.

Specialised mortgage banks Tables A, G1.1, G2-4, M1-M12, X1-3

Ship finance institutes
Tables A, G1.1, G2-4, S1-S13, X1-3
Non-specialised bank CBs issuers

Tables G1.1 (except totall capital covarage), G2-G4, B1-B1, X1-X3

Voluntary tables
The issuer can insert voluntary tables that contain information in addition to what is contained in the Danish ECBC label tamplate. It shall be possible to distinguish

The voluntary tables must be named V1....Vn, where n is the number of voluntary tables.

Voluntary tables must be maked with a colur different from the colour used for the mandatory tables in the Danish ECBC labeltamplate.

Table A. General Issuer Detail

## Key information regarding issuers' balance sheet

(DKKbn – except Tier 1 and Solvency Ratio)	Q4 2015	Q3 2015	Q2 2015	Q1 2015
Total Balance Sheet Assets	148,4	146,3	144,2	149,4
Total Customer Loans (fair value)	133,0	132,2	132,6	133,5
of which: Used/registered for covered bond collateral pool	133,0	132,2	132,6	133,5
Tier 1 Ratio (%)	12,9%	12,7%	12,4%	12,6%
Capital Ratio (%)	12,9%	12,7%	12,4%	12,6%
Outstanding Covered Bonds (fair value)	134,3	131,4	126,9	132,6
Outstanding Senior Unsecured Liabilities	0,0	0,0	0,0	0,0

Table X1		
Key Concepts Explanation	General practice in Danish market	If issuers Key Concepts Explanation differs from general practice: State are
<b>,</b>		explain in this column.
Residential versus commercial mortgages		
Description of the difference made between residential/owner occupied and commercial properties	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use	
	Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily used for commercial purposes are classified as commercial (cf. below).	
Describe when you classify a property as commercial?	The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies property as commercial are:	
E.g.: Private rental, Manufacturing and Manual Industries, Offices and Business, Agriculture.	<ul> <li>Office</li> <li>Retail/shop</li> <li>Warehouse</li> <li>Restaurants, inns etc.</li> <li>Hotels and resorts</li> <li>Congress and conference centres</li> </ul>	
	<ul><li>Agriculture</li><li>Forestry</li><li>Nurseries</li></ul>	
NPL (Non-performing loans)		
Describe how you define NPLs	A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or interests.	
	The NPL rate is calculated at different time periods after the original payment date. Standard in Table A is 90 day arrear.	
Explain how you distinguish between performing and nonperforming loans in the cover pool?	No distinction made. Asset substitution is not allowed for specialised mortgage banks.	
Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible assets in cover pool?	Asset substitution is not allowed for specialised mortgage banks, hence NPLs are part of the cover pool.	
Are loans in foreclosure procedure part of eligible assets in cover pool?	Asset substitution is not allowed for specialised mortgage banks, hence loans in foreclosure are part of the cover pool.	
If NPL and/or loans in foreclosure procedure are part of the covered pool which provisions are made in respect of the value of these loans in the cover pool?	The Danish FSA set rules for loan loss provisioning. In case of objective evidence of value reduction (OIV) provisioning for potential losses must be made.	
Table X2		
Key Concepts Explanation	Issuer specific (N/A for some issuers)	
Guaranteed loans (if part of the cover pool)		
How are the loans guaranteed?	DLR Kredit A/S's loans to agricultural properties offered before 1 January 2015 are covered by a joint guarantee agreeme distributing banks. Loans offered after 1 January 2015 are covered by individual bank guarantees from the loan distribution, combined with a 3-year loss deduction agreement and a portfolio guarantee from the loan distributing banks.	
Please provide details of guarantors	The loans to urban trade properties, e.g. private rental and office and business properties, and cooperative housing prop bank guarantees from the loan distributing banks, covering the outermost 25 - 50 % of the fair value of the loan, dependi and cooperative housing properties offered after 1 January 2015 are covered by individual bank guarantees from the loa value of the loan, combined with a 3-year loss deduction agreement and a portfolio guarantee from the loan distributing	ing on the property category. Loans to urban trade properties n distributing banks covering the outermost 6% of the fair

value of the loan, combined with a 3-year loss deduction agreement and a portfolio guarantee from the loan distributing banks.

	The guarantors are Danish regional and local banks that at the same time are shareholders of DLR Kredit A/S.
Loan-to-Value (LTV)	Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtgørelse nr. 687 af 20. juni 2007
Describe the method on which your LTV calculation is based	LTV is calculated on each property on a loan-by-loan basis, and takes into account prior-ranking loans at fair values relative to the estimated property value based on the most recent
	valuation or approved market value.

Fair value of the loan distributed are shown utilising LTV bracket intervals. The intervals become smaller as the percentage approaches par. Table M4a and M4b distribute the loan continuously from the lower LTV bracket to the upper brackets relative to fair value of the collateral, whereas in table M4c and M4d the entire loan is placed in the highest LTV bracket ("marginal distribution").

#### Example on continuously distribution into LTV brackets for a loan with fair value of 75 per cent

This example loan will be distributed with 20 per cent of the value into the lower three brackets; 10 per cent in the fourth bracket and the remaining 5 per cent of the value in the last bracket.

		— Loa	an-to-valu	e (distribu	ited conti	nuously)			
0-19.9	20-39.9	40-59.9	60-69.9	70-79.9	80-84.9	85-89.9	90-94.9	95-100	>100
20	20	20	10	5	0	0	0	0	0

#### Example on marginal distribution into LTV brackets for a loan with fair value of 75 per cent

In this case, the loan will be distributed with 100 per cent into the fifth bracket (70-79.9)

To Contents

For mortgage loans funded by the issuance of "Særligt Dækkede Obligationer" (SDO), revaluation of collateral must be carried out on an ongoing basis in order to ensure that the value of the cover asset at least matches the value of the issued SDOs at any time. Residential properties must be revaluated at least once every third year, whereas commercial and agricultural properties must be revaluated at least once a year. In times of larger fluctuations in property prices, extraordinary LTV surveillance must take place.

Should the LTV on an individual loan increase beyond the legal maximum, fx due to falling property prices, the mortgage institute must inject additional collateral into the cover pool to secure full collateral coverage.

Frequency of collateral valuation for the purpose of calculating the LTV

issuance?	amounts to investors, wortgage banks charge a margin from the corrower to cover daily operating costs, potential iosses, and to make a profit. The margin is a percentage or the outstanding debt which the borrower pays throughout the loan term. The margin rate corresponds to the interest margin of a bank but is generally lower. The issuance is made on a daily basis.
Pass-through cash flow from borrowers to investors?	Yes, the mortgage bank is an intermediary between persons requiring loans for the purchase of real properties and investors funding the loans by purchasing bonds.
Asset substitution in cover pool allowed?	No, (due to Danish legislation) asset substitution is not allowed/possible.
General explanation Table M1-M5	General practice in Danish market
Owner-occupied homes	Private owned residential properties used by the owner, Max LTV 80 % (legislation).
Holiday houses	Holiday houses for owner's own use or for subletting. Max LTV 60 % (legislation).
Subsidised Housing	Residential rental properties subsidised by the goverment. Max LTV 80 % (legislation). LTVs above 80 % can be granted against full government guarantee.
Cooperative Housing	Residential property owned and administered by the cooperative and used by the members of the cooperative. Max LTV 80 % (legislation).
Private rental	Residential property rented out to private tenants. Max LTV 80 % (legislation).
Manufacturing and Manual Industries	Industrial and manufacturing buildings and warehouses for own use or for renting. Max LTV 60 % (legislation).
Office and Business	Office property and retail buildings for own use or for rent. Max LTV 60 % (legislation).
Agriculture	Property and land for agricultural use. Max LTV 70 % (legislation). Lending from 60 - 70 % LTV however only against additional collateral.
Social and cultural purposes	Property used for education, kindergardens, museums and other buildings for public use. Max LTV 70 % (legislation).
Other	Property, that can not be placed in the categories above, fx unused land or green energy plants. Max LTV 70 % (legislation).

Mortgage banks issue and sell bonds to investors, who then fund the loans. During the loan term, borrowers make principal and interest payments to mortgage banks which transfer the

Max LTV 70 % (legislation).  Property, that can not be placed in the categories above, fx unused land or green energy plants. Max LTV 70 % (legislation).
General explanation Table M6-M8	General practice in Danish market
Index Loans	These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denmark in 1982. All Danish index loans have semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the loan type. Especially the maturity for subsidized housing depends on the size of the future inflation rate.
Fixed-rate loans	The long-term – typically 30-year – fixed-rate, callable loan is considered the most traditional Danish mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods.
Adjustable Rate Mortgages	Adjustable-rate mortgages (ARMs) were introduced in 1996, and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans, when the loan is raised. The interest rate is generally reset at a frequency of 1, 3, 5 or 10 years, and the underlying bonds are then replaced by new bonds. The yield of the new bonds determines the loan rate for the period until the next interest rate reset. The lower initial loan rate should therefore be weighed against the risk that it will increase during the loan term.  An ARM may be prepaid at a price of 100 in connection with each interest rate reset. Alternatively, the borrower may prepay the loan by purchasing the bonds on market terms – as with all mortgage loans. This loan type is also offered with interest-only periods.
Money market based loans	The loan rate is generally fixed for 3 or 6 months. In addition, this loan type differs from ARMs as the interest rate is linked to a reference rate, i.e. an interest rate determined in the money market. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quoted daily by DKM XASDAQ. This loan type is also offered with interest rothy periods.
Non Capped floaters Capped floaters Other	These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan has a cap Any other loan types, which not comply with the above mentioned.
General explanation Table M9-10	General practice in Danish market
Seasoning	Seasoning defined by duration of customer relationship, calculated from the first disbursement of a mortgage loan.
