Key Concepts Explanation	General practice in Danish market	avalain in this column
Residential versus commercial mortgages		
Description of the difference made between residential/owner occupied and		
commercial properties	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.	
	Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily used	
	for commercial purposes are classified as commercial (cf. below).	
	to commercial purposes are diagramed as commercial (circles w).	
Describe when you classify a property as commercial?	The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies	
	property as commercial are:	
E.g.: Private rental, Manufacturing and Manual Industries, Offices and Business,	· Office	
Agriculture.	· Retail/shop	
	· Warehouse	
	· Restaurants, inns etc.	
	Hotels and resorts	
	Congress and conference centres	
	· Agriculture	
	· Forestry	
	· Nurseries	
NPL (Non-performing loans)		
Describe how you define NPLs	A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or	
bescribe now you define NF LS	interests.	
	The NPL rate is calculated at different time periods after the original payment date. Standard in Table A is 90 day arrear.	
Explain how you distinguish between performing and nonperforming loans in the cover	No distinction made. Asset substitution is not allowed for specialised mortgage banks.	
pool?		
Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible assets in	Asset substitution is not allowed for specialised mortgage banks, hence NPLs are part of the cover pool.	
cover pool?		
Are loans in foreclosure procedure part of eligible assets in cover pool?	Asset substitution is not allowed for specialised mortgage banks, hence loans in foreclosure are part of the cover pool.	
	A SECTION OF THE PROPERTY OF THE POST OF T	
If NPL and/or loans in foreclosure procedure are part of the covered pool which	The Danish FSA set rules for loan loss provisioning. In case of objective evidence of value reduction (OIV) provisioning for	
provisions are made in respect of the value of these loans in the cover pool?	potential losses must be made.	
Table X2		
	Issuer specific	
Key Concepts Explanation	(N/A for some issuers)	
Guaranteed loans (if part of the cover pool)		
How are the loans guaranteed?	DLR Kredit A/S's loans to agricultural properties are covered by a joint guarantee and loss deduction agreement with the	
Please provide details of guarantors	The loans to urban trade properties, e.g. private rental and cooperative housing properties, and office and business properties.	erties, are covered by individual bank guarantees from the loan
	distributing banks, covering the outermost 25 - 50 % of the fair value of the loan, depending on the property category.	
	The guarantors are at the same time shareholders of DLR Kredit A/S.	
Loan-to-Value (LTV)	Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtgørelse nr. 687 af 20. juni 2007	
Describe the method on which your LTV calculation is based	LTV is calculated on each property on a loan-by-loan basis, and takes into account prior-ranking loans at fair values relativ	ve to the estimated property value based on the most recent

valuation or approved market value.

("marginal distribution").

 $\underline{\text{Example on continuously distribution into LTV brackets for a loan with fair value of 75 per cent}\\$

This example loan will be distributed with 20 per cent of the value into the lower three brackets; 10 per cent in the fourth bracket and the remaining 5 per cent of the value in the last bracket.

Fair value of the loan distributed are shown utilising LTV bracket intervals. The intervals become smaller as the percentage approaches par. Table M4a and M4b distribute the loan continuously from the lower LTV bracket to the upper brackets relative to fair value of the collateral, whereas in table M4c and M4d the entire loan is placed in the highest LTV bracket

Loan-to-value (distributed continuously)									
0-19.9	20-39.9	40-59.9	60-69.9	70-79.9	80-84.9	85-89.9	90-94.9	95-100	>100
20	20	20	10	5	0	0	0	0	0

Example on marginal distribution into LTV brackets for a loan with fair value of 75 per cent

In this case, the loan will be distributed with 100 per cent into the fifth bracket (70-79.9)

To Contents

For mortgage loans funded by the issuance of "Særligt Dækkede Obligationer" (SDO), revaluation of collateral must be carried out on an ongoing basis in order to ensure that the value of the cover asset at least matches the value of the issued SDOs at any time. Residential properties must be revaluated at least once every third year, whereas commercial and agricultural properties must be revaluated at least once a year. In times of larger fluctuations in property prices, extraordinary LTV surveillance must take place.

Should the LTV on an individual loan increase beyond the legal maximum, fx due to falling property prices, the mortgage institute must inject additional collateral into the cover pool to secure full collateral coverage.

Frequency of collateral valuation for the purpose of calculating the LTV

Table X3 General explanation	
Table A	General practice in Danish market
Total Balance Sheet Assets	Total balance sheet assets as reported in the interim or annual reports of the issuer, fair value
Total Customer Loans(fair value)	All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage bonds, measured at fair value
Tier 1 Ratio (%)	The tier I capital ratio as stipulated in DFSA regulations
Solvency Ratio (%)	The solvency ratio as stipulated in DFSA regulations
Outstanding Covered Bonds (fair value)	The circulating amount of covered bonds (including covered mortgage bonds and mortgage bonds)
Outstanding Senior Unsecured Liabilities	All outstanding senior unsecured liabilities including any intra-group senior unsecured liabilities to finance OC- and LTV-ratio requirements
Senior Secured Bonds	Senior secured bonds - formerly known as JCB (Section 15 bonds)
Guarantees (e.g. provided by states, municipals, banks)	All guarantees backing the granted loans provided by e.g. states, municipalities or banks
Net loan losses (Net loan losses and net loan loss provisions)	The item taken from the issuer's profit & loss account
Value of acquired properties / ships (temporary possessions, end quarter)	Value as entered in interim and annual reports and as reported to the DFSA; The lower of the carrying amount at the time of classification and the fair value less selling costs.
Total customer loans (market value)	All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage bonds, measured at market value
Maturity	Maturity distribution of all mortgage credit loans
Non-performing loans (See definition in table X1)	Please see definition of Non-performing loans in table X1
Loan loss provisions (sum of total individual and group wise loss provisions, end of	All individual and group wise loan loss provisions, as stated in the issuer's interim and annual accounts
quarter)	
General explanation	General practice in Danish market
Table G1.1	
Nominal cover pool (total value)	Sum of nominal value of covered bonds + Senior secured debt + capital. Capital is: Additional tier 1 capital (e.g. hybrid core capital) and Core tier 1 capital
Transmission or liquidation proceeds to CB holders (for redemption of CBs maturing 0-1	Liquidity due to be paid out next day in connection with refinancing
day)	
Overcollateralisation	Total value of cover pool less nominal value of covered bonds
Senior secured debt	Total nominal value of senior secured debt
Senior unsecured debt	Iouan ionimal value or serior secured deut. Issuer's serior unsecured liabilities targeted to finance OC- and LTV-ratio requirements in cover pool
Tier 2 capital	Issuer a senior insecureu naumities targeteu to finance occi and Et viratio requirements in cover pour
Additional tier 1 capital (e.g. hybrid core capital)	
	Hybrid Tier 1 capital (perpetual debt instruments).
Core tier 1 capital	Equity capital and retained earnings.
General explanation Table G3	General practice in Danish market
General balance principle	The general balance principle does not require a one-to-one balance between the loan and the bonds issued. This gives the credit institution a wider scope for taking liquidity risk than the
General balance principle	the general branks, principle use in tequile a direct-one branks between the roan and the bonds issued. This gives the cledit institution a while scope for banks inquirity risk than the more strict specific balance principle.
Specific balance principle	The specific balance principle ensures a one-to-one balance between loans and bonds issued, and is used for the issuance of SDRO, SDO and RO bonds.
	The specific balance principle de facto implies full cash flow pass through from borrowers to investors. Under this principle daily loan origination is continuously tapped into the market,
	and the individual borrower loan rate is determined directly by the bond sales price for the corresponding financing amount of bonds. All borrower payments of interest and principal
	match the interest and principal payments to investors exactly (borrower payments fall due one day prior to the payments to investors). Redemptions take place by borrowers' buy back
	of the financing bond in the market at market price, or (for callable bonds) by calling the bond at par. In the latter case the borrower prepayment match the bond draw down.
	Market risks are thus eliminated under this issuance model (i.e. interest rate risk, prepayment risks, liquidity risks and funding risks). Further, asset substitution is not possible under this
	issuance model.
General explanation Table G4	General practice in Danish market
One-to-one balance between terms of granted loans and bonds issued, i.e. daily tap	Mortgage banks issue and sell bonds to investors, who then fund the loans. During the loan term, borrowers make principal and interest payments to mortgage banks which transfer the
issuance?	amounts to investors. Mortgage banks charge a margin from the borrower to cover daily operating costs, potential losses, and to make a profit. The margin is a percentage of the oustanding debt which the borrower pays throughout the loan term. The margin rate corresponds to the interest margin of a bank but is generally lower. The issuance is made on a daily basis.
Pass-through cash flow from borrowers to investors?	Yes, the mortgage bank is an intermediary between persons requiring loans for the purchase of real properties and investors funding the loans by purchasing bonds.

Pass-through cash flow from borrowers to investors?	Yes, the mortgage bank is an intermediary between persons requiring loans for the purchase of real properties and investors funding the loans by purchasing bonds.
Asset substitution in cover pool allowed?	No, (due to Danish legislation) asset substitution is not allowed/possible.
General explanation Table M1-M5	General practice in Danish market
Owner-occupied homes	Private owned residential properties used by the owner, Max LTV 80 % (legislation).
Holiday houses	Holiday houses for owner's own use or for subletting. Max LTV 60 % (legislation).
Subsidised Housing	Residential rental properties subsidised by the goverment. Max LTV 80 % (legislation). LTVs above 80 % can be granted against full government guarantee.
Cooperative Housing	Residential property owned and administered by the cooperative and used by the members of the cooperative. Max LTV 80 % (legislation).
Private rental	Residential property rented out to private tenants. Max LTV 80 % (legislation).
Manufacturing and Manual Industries	Industrial and manufacturing buildings and warehouses for own use or for renting. Max LTV 60 % (legislation).
Office and Business	Office property and retail buildings for own use or for rent. Max LTV 60 % (legislation).
Agriculture	Property and land for agricultural use. Max LTV 70 % (legislation). Lending from 60 - 70 % LTV however only against additional collateral.
Social and cultural purposes	Property used for education, kindergardens, museums and other buildings for public use. Max LTV 70 % (legislation).
Other	Property, that can not be placed in the categories above, fx unused land or green energy plants. Max LTV 70 % (legislation).
General explanation	General practice in Danish market

Index Loons	

Agriculture Social and cultural purposes Other	Property and land for agricultural use. Max LTV 70 % (legislation). Lending from 60 - 70 % LTV however only against additional collateral. Property used for education, kindergardens, museums and other buildings for public use. Max LTV 70 % (legislation). Property, that can not be placed in the categories above, fx unused land or green energy plants. Max LTV 70 % (legislation).
General explanation Table M6-M8	General practice in Danish market
Index Loans	These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Demmark in 1982. All Danish index loans have semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the loan type. Especially the maturity for subsidized housing depends on the size of the future inflation rate.
Fixed-rate loans	The long-term – typically 30-year – fixed-rate, callable loan is considered the most traditional Danish mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods.
Adjustable Rate Mortgages	Adjustable-rate mortgages (ARMs) were introduced in 1996, and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans, when the loan is raised. The interest rate is generally reset at a frequency of 1, 3, 5 or 10 years, and the underlying bonds are then replaced by new bonds. The yield of the new bonds determines the loan rate for the period until the next interest rate reset. The lower initial loan rate should therefore be weighed against the risk that it will increase during the loan term. An ARM may be prepaid at a price of 100 in connection with each interest rate reset. Alternatively, the borrower may prepay the loan by purchasing the bonds on market terms – as with all mortgage loans. This loan type is also offered with interest-only periods.
Money market based loans	The loan rate is generally fixed for 3 or 6 months. In addition, this loan type differs from ARMs as the interest rate is linked to a reference rate, i.e. an interest rate determined in the money market. The reference rate of Dix-Genominated loans is GIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quoted daily by OMX NASDAQ. This loan type is also offered with interest-only periods.
Non Capped floaters	These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA
Capped floaters Other	It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan has a cap Any other loan types, which not comply with the above mentioned.
General explanation Table M9-10	General practice in Danish market
Seasoning	Seasoning defined by duration of customer relationship, calculated from the first disbursement of a mortgage loan.
