Table X1		
Key Concepts Explanation	General practice in Danish market	If issuers Key Concepts Explanation differs from general practice: State and explain in this column.
Residential versus commercial mortgages		
Description of the difference made between residential/owner occupied and commercial properties	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use	<u>.</u>
	Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily used for commercial purposes are classified as commercial (cf. below).	
Describe when you classify a property as commercial?	The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies property as commercial are:	
E.g.: Private rental, Manufacturing and Manual Industries, Offices and Business, Agriculture.	Office     Retail/shop     Warehouse     Restaurants, inns etc.     Hotels and resorts	
	<ul> <li>Congress and conference centres</li> <li>Agriculture</li> <li>Forestry</li> <li>Nurseries</li> </ul>	
NPL (Non-performing loans)		
Describe how you define NPLs	A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or interests.	
	The NPL rate is calculated at different time periods after the original payment date. Standard in Table A is 90 day arrear.	
Explain how you distinguish between performing and nonperforming loans in the cover pool?	No distinction made. Asset substitution is not allowed for specialised mortgage banks.	
Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible assets in cover pool?	Asset substitution is not allowed for specialised mortgage banks, hence NPLs are part of the cover pool.	
Are loans in foreclosure procedure part of eligible assets in cover pool?	Asset substitution is not allowed for specialised mortgage banks, hence loans in foreclosure are part of the cover pool.	
If NPL and/or loans in foreclosure procedure are part of the covered pool which provisions are made in respect of the value of these loans in the cover pool?	The Danish FSA set rules for loan loss provisioning. In case of objective evidence of value reduction (OIV) provisioning fo potential losses must be made.	,
Table X2		
Key Concepts Explanation	Issuer specific (N/A for some issuers)	
Guaranteed loans (if part of the cover pool)		
How are the loans guaranteed?	DLR Kredit A/S's loans to agricultural properties offered before 1 January 2015 are covered by a joint guarantee agreeme distributing banks. Loans offered after 1 January 2015 are covered by individual bank guarantees from the loan distribut loan, combined with a 3-year loss deduction agreement and a portfolio guarantee from the loan distributing banks.	
Please provide details of guarantors	The loans to urban trade properties, e.g. private rental and office and business properties, and cooperative housing prop bank guarantees from the loan distributing banks, covering the outermost 25 - 50 % of the fair value of the loan, depend and cooperative housing properties offered after 1 January 2015 are covered by individual bank guarantees from the loa value of the loan, combined with a 3-year loss deduction agreement and a portfolio guarantee from the loan distributing	ing on the property category. Loans to urban trade properties n distributing banks covering the outermost 6% of the fair

	The guarantors are Danish regional and local banks that at the same time are shareholders of DLR Kredit A/S.								
Loan-to-Value (LTV)	The guarantors are parish regional and local balans that at the same time are shareholders or DLK Neur A/S. Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtgerelse nr. 687 af 20. juni 2007								
Describe the method on which your LTV calculation is based	LTV is calculated on each property on a loan-by-loan basis, and takes into account prior-ranking loans at fair values relative to the estimated property value based on the most recent valuation or approved market value.								
	Fair value of the loan distributed are shown utilising LTV bracket intervals. The intervals become smaller as the percentage approaches par. Table M4a and M4b distribute the loan continuously from the lower LTV bracket to the upper brackets relative to fair value of the collateral, whereas in table M4c and M4d the entire loan is placed in the highest LTV bracket ("marginal distribution").								
	Example on continuously distribution into LTV brackets for a loan with fair value of 75 per cent. This example loan will be distributed with 20 per cent of the value into the lower three brackets; 10 per cent in the fourth bracket and the remaining 5 per cent of the value in the last bracket.								
	Loan-to-value (distributed continuously)								
	20 20 20 10 5 0 0 0 0 0								
	Example on marginal distribution into LTV brackets for a loan with fair value of 75 per cent In this case, the loan will be distributed with 100 per cent into the fifth bracket (70-79.9)								
Frequency of collateral valuation for the purpose of calculating the LTV	To Contents For mortgage loans funded by the issuance of "Særligt Dækkede Obligationer" (SDO), revaluation of collateral must be carried out on an ongoing basis in order to ensure that the value of the cover asset at least matches the value of the issued SDOs at any time. Residential properties must be revaluated at least once every third year, whereas commercial and agricultural properties must be revaluated at least once a year. In times of larger fluctuations in property prices, extraordinary LTV surveillance must take place.								

Should the LTV on an individual loan increase beyond the legal maximum, fx due to falling property prices, the mortgage institute must inject additional collateral into the cover pool to secure full collateral coverage.

	dr kredit.
Table X3 General explanation	a ndoka
Table A	General practice in Danish market
Total Balance Sheet Assets Total Customer Loans(fair value)	Total balance sheet assets as reported in the interim or annual reports of the issuer, fair value All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage bonds, measured at fair value
Tier 1 Ratio (%)	The tier 1 capital ratio as stipulated in DFSA regulations
Solvency Ratio (%) Outstanding Covered Bonds (fair value)	The solvency ratio as stipulated in DFSA regulations The circulating amount of covered bonds (including covered mortgage bonds and mortgage bonds)
Outstanding Senior Unsecured Liabilities	All outstanding senior unsecured liabilities including any intra-group senior unsecured liabilities to finance OC- and LTV-ratio requirements
Senior Secured Bonds Guarantees (e.g. provided by states, municipals, banks)	Senior secured bonds - formerly known as JCB (Section 15 bonds) All guarantees backing the granted loans provided by e.g. states, municipalities or banks
Value of acquired properties / ships (temporary possessions, end quarter)	An guarances because the granical loans province of e.g. states, maincipanities of bains. The item taken from the issues 's profit & loss account Value as entered in interim and annual reports and as reported to the DFSA; The lower of the carrying amount at the time of classification and the fair value less selling costs.
Total customer loans (market value)	All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage bonds, measured at market value
Maturity	Maturity distribution of all mortgage credit loans
Non-performing loans (See definition in table X1) Loan loss provisions (sum of total individual and group wise loss provisions, end of	Please see definition of Non-performing loans in table X1 All individual and group wise loan loss provisions, as stated in the issuer's interim and annual accounts
quarter)	
General explanation Table G1.1	General practice in Danish market
Nominal cover pool (total value)	Sum of nominal value of covered bonds + Senior secured debt + capital. Capital is: Additional tier 1 capital (e.g. hybrid core capital) and Core tier 1 capital
Transmission or liquidation proceeds to CB holders (for redemption of CBs maturing 0-1 day)	Liquidity due to be paid out next day in connection with refinancing
Overcollateralisation	Total value of cover pool less nominal value of covered bonds
Senior secured debt	Total nominal value of senior secured debt
Senior unsecured debt Tier 2 capital	Issuer's senior unsecured liabilities targeted to finance OC- and LTV-ratio requirements in cover pool Subordinated debt
Additional tier 1 capital (e.g. hybrid core capital) Core tier 1 capital	Hybrid Tier 1 capital (perpetual debt instruments). Equity capital and retained earnings.
General explanation	General practice in Danish market
Table G3 General balance principle	The general balance principle does not require a one-to-one balance between the loan and the bonds issued. This gives the credit institution a wider scope for taking liquidity risk than the
	more strict specific balance principle.
Specific balance principle	The specific balance principle ensures a one-to-one balance between loans and bonds issued, and is used for the issuance of SDRO, SDO and RO bonds.
	The specific balance principle de facto implies full cash flow pass through from borrowers to investors. Under this principle daily loan origination is continuously tapped into the market,
	and the individual borrower loan rate is determined directly by the bond sales price for the corresponding financing amount of bonds. All borrower payments to investes and principal ayments to investore search (borrower payments fail use one day prior to the payments to investors). Redemptions take place by borrowers' buy back of the financing bond in the market at market price, or (for callable bonds) by calling the bond at par. In the latter case the borrower prepayment match the bond draw down.
	Market risks are thus eliminated under this issuance model (i.e. interest rate risk, prepayment risks, liquidity risks and funding risks). Further, asset substitution is not possible under this issuance model.
General explanation Table G4	General practice in Danish market
One-to-one balance between terms of granted loans and bonds issued, i.e. daily tap issuance?	Mortgage banks issue and sell bonds to investors, who then fund the loans. During the loan term, borrowers make principal and interest payments to mortgage banks which transfer the amounts to investors. Mortgage banks charge a margin from the borrower to cover daily operating costs, potential losses, and to make a profit. The margin is a percentage of the
	outstanding debt which the borrower pays throughout the loan term. The margin rate corresponds to the interest margin of a bank but is generally lower. The issuance is made on a daily basis.
Pass-through cash flow from borrowers to investors?	Yes, the mortgage bank is an intermediary between persons requiring loans for the purchase of real properties and investors funding the loans by purchasing bonds.
Asset substitution in cover pool allowed?	No, (due to Danish legislation) asset substitution is not allowed/possible.
General explanation Table M1-M5	General practice in Danish market
Owner-occupied homes Holiday houses	Private owned residential properties used by the owner, Max LTV 80 % (legislation). Holiday houses for owner's own use or for subletting. Max LTV 60 % (legislation).
Subsidised Housing	Residential rental properties subsidised by the goverment. Max LTV 80 % (legislation). LTVs above 80 % can be granted against full government guarantee.
Cooperative Housing Private rental	Residential property owned and administered by the cooperative and used by the members of the cooperative. Max LTV 80 % (legislation). Residential property rented out to private tenants. Max LTV 80 % (legislation).
Manufacturing and Manual Industries	Industrial and manufacturing buildings and warehouses for own use or for renting. Max LTV 60 % (legislation).
Office and Business Agriculture	Office property and retail buildings for own use or for rent. Max LTV 60 % (legislation). Property and land for agricultural use. Max LTV 70 % (legislation). Lending from 60 - 70 % LTV however only against additional collateral.
Social and cultural purposes	Property used for education, kindergardens, museums and other buildings for public use. Max LTV 70 % (legislation).
Social and cultural purposes Other
