Table X1		
Key Concepts Explanation	General practice in Danish market	If issuers Key Concepts Explanation differs from general practice: State and explain in this column.
Residential versus commercial mortgages		
Description of the difference made between residential/owner occupied and commercial properties	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use	2.
	Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily used for commercial purposes are classified as commercial (cf. below).	
Describe when you classify a property as commercial?	The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies property as commercial are:	
E.g.: Private rental, Manufacturing and Manual Industries, Offices and Business,	· Office	
Agriculture.	· Retail/shop	
	· Warehouse	
	Restaurants, inns etc.	
	Hotels and resorts     Congress and conference centres	
	Agriculture	
	· Forestry	
	· Nurseries	
NPL (Non-performing loans)		
Describe how you define NPLs	A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or interests.	
	The NPL rate is calculated at different time periods after the original payment date. Standard in Table A is 90 day arrear.	
Explain how you distinguish between performing and nonperforming loans in the cover pool?	No distinction made. Asset substitution is not allowed for specialised mortgage banks.	
Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible assets in cover pool?	Asset substitution is not allowed for specialised mortgage banks, hence NPLs are part of the cover pool.	
Are loans in foreclosure procedure part of eligible assets in cover pool?	Asset substitution is not allowed for specialised mortgage banks, hence loans in foreclosure are part of the cover pool.	
If NPL and/or loans in foreclosure procedure are part of the covered pool which provisions are made in respect of the value of these loans in the cover pool?	The Danish FSA set rules for loan loss provisioning. In case of objective evidence of value reduction (OIV) provisioning for potential losses must be made.	r
Table X2		
Key Concepts Explanation	Issuer specific	
Ney Concepts Explanation	(N/A for some issuers)	
Guaranteed loans (if part of the cover pool)		
	DLR Kredit A/S's loans to agricultural properties offered before 1 January 2015 are covered by a joint guarantee agreeme	-
How are the loans guaranteed?	distributing banks. Loans offered after 1 January 2015 are covered by individual bank guarantees from the loan distribut loan, combined with a 3-year loss deduction agreement and a portfolio guarantee from the loan distributing banks.	ing banks covering the outermost 6% of the fair value of the

Please provide details of guarantors

bank guarantees from the loan distributing banks, covering the outermost 25 - 50 % of the fair value of the loan, depending on the property category. Loans to urban trade properties and cooperative housing properties offered after 1 January 2015 are covered by individual bank guarantees from the loan distributing banks covering the outermost 6% of the fair value of the loan, combined with a 3-year loss deduction agreement and a portfolio guarantee from the loan distributing banks.

The loans to urban trade properties, e.g. private rental and office and business properties, and cooperative housing properties offered before 1 January 2015 are covered by individual

The guarantors are Danish regional and local banks that at the same time are shareholders of DLR Kredit A/S.

Loan-to-Value (LTV)	Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtgørelse nr. 687 af 20. juni 2007						
Describe the method on which your LTV calculation is based	LTV is calculated on each property on a loan-by-loan basis, and takes into account prior-ranking loans at fair values relative to the estimated property value based on the most recent valuation or approved market value.						
	Fair value of the loan distributed are shown utilising LTV bracket intervals. The intervals become smaller as the percentage approaches par. Table M4a and M4b distribute the loan continuously from the lower LTV bracket to the upper brackets relative to fair value of the collateral, whereas in table M4c and M4d the entire loan is placed in the highest LTV bracket ("marginal distribution").						
	Example on continuously distribution into LTV brackets for a loan with fair value of 75 per cent. This example loan will be distributed with 20 per cent of the value into the lower three brackets; 10 per cent in the fourth bracket and the remaining 5 per cent of the value in the last bracket.						
	Loan-to-value (distributed continuously)						
	20 20 20 10 5 0 0 0 0 0						
	Example on marginal distribution into LTV brackets for a loan with fair value of 75 per cent In this case, the loan will be distributed with 100 per cent into the fifth bracket (70-79.9)						
Frequency of collateral valuation for the purpose of calculating the LTV	To Contents For mortgage loans funded by the issuance of "Særligt Dækkede Obligationer" (SDO), revaluation of collateral must be carried out on an ongoing basis in order to ensure that the value of the cover asset at least matches the value of the issued SDOs at any time. Residential properties must be revaluated at least once every third year, whereas commercial and agricultural properties must be revaluated at least once a year. In times of larger fluctuations in property prices, extraordinary LTV surveillance must take place.						

Should the LTV on an individual loan increase beyond the legal maximum, fx due to falling property prices, the mortgage institute must inject additional collateral into the cover pool to secure full collateral coverage.

able X3	<b>dlr kred</b> w reden
General explanation Table A	General practice in Danish market
otal Balance Sheet Assets	Total balance sheet assets as reported in the interim or annual reports of the issuer, fair value
otal Customer Loans(fair value)	All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage bonds, measured at fair value
er 1 Ratio (%)	The tier 1 capital ratio as stipulated in DFSA regulations
lvency Ratio (%)	The solvency ratio as stipulated in DFSA regulations
Itstanding Covered Bonds (fair value) Itstanding Senior Unsecured Liabilities	The circulating amount of covered bonds (including covered mortgage bonds and mortgage bonds) All outstanding senior unsecured liabilities including any intra-group senior unsecured liabilities to finance OC- and LTV-ratio requirements
nior Secured Bonds	An outstanding serior discution and instantises including any intergroup serior discuted nationals to mance oct and crivia do requirements Serior secured bonds - formerly known as JCB (section 15 bonds)
arantees (e.g. provided by states, municipals, banks)	All guarantees backing the granted loans provided by e.g. states, municipalities or banks
t loan losses (Net loan losses and net loan loss provisions) lue of acquired properties / ships (temporary possessions, end quarter)	The item taken from the issuer's profit & loss account Value as entered in interim and annual reports and as reported to the DFSA; The lower of the carrying amount at the time of classification and the fair value less selling costs.
tal customer loans (market value)	All mortrage credit loans funded by the issue of covered mortrage bonds or mortrage bonds, measured at market value
aturity	An margage clean tools taked by the save of core of mangage boilds of margage boilds, measured at market value Maturity distribution of all mortgage credit loans
n-performing loans (See definition in table X1)	Please see definition of Non-performing loans in table X1
an loss provisions (sum of total individual and group wise loss provisions, end of arter)	All individual and group wise loan loss provisions, as stated in the issuer's interim and annual accounts
General explanation	General practice in Danish market
Table G1.1 ominal cover pool (total value)	Sum of nominal value of covered bonds + Senior secured debt + capital. Capital is: Additional tier 1 capital (e.g. hybrid core capital) and Core tier 1 capital
ansmission or liquidation proceeds to CB holders (for redemption of CBs maturing 0-1	
y)	
recollateralisation	Total value of cover pool less nominal value of covered bonds
nior secured debt	Total nominal value of senior secured debt
nior unsecured debt	Issuer's senior unsecured liabilities targeted to finance OC- and LTV-ratio requirements in cover pool
er 2 capital Idiional tior 1 capital (a.g. hubrid care capital)	Subordinated debt Hybrid Tier 1 capital (perpetual debt instruments).
lditional tier 1 capital (e.g. hybrid core capital) re tier 1 capital	Hybria (IEF 1 capital (Derpetual deot Instruments). Equity capital and retained earnings.
General explanation Table G3	General practice in Danish market
eneral balance principle	The general balance principle does not require a one-to-one balance between the loan and the bonds issued. This gives the credit institution a wider scope for taking liquidity risk than more strict specific balance principle.
ecific balance principle	The specific balance principle ensures a one-to-one balance between loans and bonds issued, and is used for the issuance of SDRO, SDO and RO bonds.
	The specific balance principle de facto implies full cash flow pass through from borrowers to investors. Under this principle de aluj loan origination is continuously tapped into the marker and the individual borrower loan rate is determined directly by the bond sales price for the corresponding financing amount of bonds. Alb borrower payments of interest and principal match the interest and principal payments to investors exactly (borrower payments fall due one day prior to the payments to interest and principal of the financing bond in the market at market price, or (for callable bonds) by calling the bond at par. In the latter case the borrower prepayment match the bond draw down.
	Market risks are thus eliminated under this issuance model (i.e. interest rate risk, prepayment risks, liquidity risks and funding risks). Further, asset substitution is not possible under th
	issuance model.
General explanation Table 64	General practice in Danish market
Ine-to-one balance between terms of granted loans and bonds issued, i.e. daily tap	Mortgage banks issue and sell bonds to investors, who then fund the loans. During the loan term, borrowers make principal and interest payments to mortgage banks which transfer th
suance?	amounts to investors. Mortgage banks charge a margin from the borrower to cover daily operating costs, potential losses, and to make a profit. The margin is a percentage of the
	outstanding debt which the borrower pays throughout the loan term. The margin rate corresponds to the interest margin of a bank but is generally lower. The issuance is made on a da basis.
