Table X1
Key Concepts Explanation
$\frac{\text { Residential versus commercial mortgages }}{\text { Description of the difference made between residential/owner occupied and }}$
commercial properties

Describe when you classify a property as commercial?
ntal, Manufacturing and Manual Industries, Offices and Busines Agriculture

Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily use for commercial purposes are classified as commercial (cf below).

The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies

Warehouse
Restarrants, ins
Congress and conference centres
Agriculture
orestrie
an is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or

No distinction made. Asset substitution is not allowed for specialised mortgage banks. potential losses must be made

## Table X2

## Key Concepts Explanation <br> Issuer specific

## Suaranteed loans (if part of the cover pool)

How are the loans guaranted?
ease provide details of guarantors
The loans to urban trade properties, e.g. private rental and cooperative housing properties, and office and business properties, are covered by individual bank guarantees from the loan distributing banks, covering the outermost $25-50 \%$ of the fair value of the loan, depending on the property category
The guarantors are Danish regional and local banks that at the same time are shareholders of DLR Kredit A/S.
an-to-Value (LTV)
Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA- Bekendtggrelse nr. 687 af 20. juni 2007 .
LTV is calculated on each property on a loan-by-loan basis, and takes into account prior-ranking loans at fair values relative to the estimated property value based on the most recent valuation or approved market value.

Fair value of the loan distributed are shown utilising LTV bracket intervals. The intervals become smaller as the percentage approaches par. Table M4a and M4b distribute the loan continuously from the lower LTV bracket to the upper brackets relative to fair value of the collateral, whereas in table M4c and M4d the entire loan is placed in the highest LTV bracket ("marginal distribution").

## Example on continuously distribution into LTV brackets for a loan with fair value of 75 per cent

This example loan will be distributed with 20 per cent of the value into the lower three brackets; 10 per cent in the fourth bracket and the remaining 5 per cent of the value in the last bracket.

| 0-19.9 | 20-39.9 | 40-59.9 | 60-69.9 | 70-79.9 | 80-84.9 | 85-89.9 | 90-94.9 | 95-100 | >100 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 20 | 20 | 20 | 10 | 5 | 0 | 0 | 0 | 0 | 0 |

Example on marginal distribution into LTV brackets for a loan with fair value of 75 per cent In this case, the loan will be distribed with 100 per cent into the fift bracket $(70.79 .9)$

To Contents
For mortgage loans funded by the issuance of "Særligt Dækkede Obligationer" (SDO), revaluation of collateral must be carried out on an ongoing basis in order to ensure that the agricultural properties must be revaluated at least once a year. In times of larger fluctuations in property prices, extraordinary LTV surveillance must take place.

Should the LTV on an individual loan increase beyond the legal maximum, fx due to falling property prices, the mortgage institute must inject additional collateral into the cover pool to secure full collateral coverage.

## General e Table 63 <br> Table G3 principle

Specific balance principle

General practice in Danish market
Total balance sheet assets as reported in the interim or annual reports of the issuer fair value
All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage bonds, measured at fair value
The tier 1 capital ratio as stipulated in DFSA regulations
The solvency ratio as stipulated in DFSA regulations
The circulating amount of covered bonds (including covered mortgage bonds and mortgage bonds
All outstanding senior unsecured liabilities including any intra-group senior unsecured liabilities to finance $O C$ - and $L T V$-ratio requirements
Senior secured bonds - formerly known as JCB (S S ion 15 bonds)
The item taken from the issuer's profit \& loss account
Value as entered in interim and annual reports and as reported to the DFSA; The lower of the carrying amount at the time of classification and the fair value less selling costs.
All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage bonds, measured at market value
Maturity distribution of all mortgage credit loans
All individual and group wise loan loss provisions, as stated in the issuer's interim and annual accounts

## Seneral practice in Danish market

Sum of nominal value of covered bonds + Senior secured debt + capital. Capital is: Additional tier 1 capital (e.g. hybrid core capital) and Core tier 1 capital
Liquidity due to be paid out next day in connection with refinancing

Total nominal value of senior secured debt
Issuer's senior unsecured liabilities targeted to finance OC- and LTV-ratio requirements in cover pool
Subordinated debt
brid Tier 1 capital (perpetual debt instruments).
Equity capital and retained earnings.

## General practice in Danish market

The general balance principle does not require a one-to-one balance between the loan and the bonds issued. This gives the credit institution a wider scope for taking liquidity risk than the more strict specific balance principle.

The specific balance principle ensures a one-to-one balance between loans and bonds issued, and is used for the issuance of SDRO, SDO and RO bonds.
The specific balance principle de facto implies full cash flow pass through from borrowers to investors. Under this principle daily loan origination is continuously tapped into the market, and the individual borrower loan rate is determined directly by the bond sales price for the corresponding financing amount of bonds. All borrower payments of interest and principal match the interest and principal payments to investors exactly (borrower payments fall due one day prior to the payments to investors). Redemptions take place by borrowers' buy
of the financing bond in the market at market price, or (for callable bonds) by calling the bond at par. In the latter case the borrower prepayment match the bond draw down.

Market risks are thus eliminated under this issuance model (i.e. interest rate risk, prepayment risks, liquidity risks and funding risks). Further, asset substitution is not possible under this issuance model.

## General practice in Danish market

Mortgage banks issue and sell bonds to investors, who then fund the loans. During the loan term, borrowers make principal and interest payments to mortgage banks which transfer the mounts to investors. Mortgage banks charge a margin from the borrower to cover daily operating costs, potential losses, and to make a profit. The margin is a percentage of the utstanding debt which the borrower pays throughout the loan term. The margin rate corresponds to the interest margin of a bank but is generally lower. The issuance is made on a daily basis.

Yes, the mortgage bank is an intermediary between persons requiring loans for the purchase of real properties and investors funding the loans by purchasing bonds.
No, (due to Danish legislation) asset substitution is not allowed/possible.

## General practice in Danish market

Private owned residential properties used by the owner, Max LTV $80 \%$ (legislation).
Holiday houses for owner's own use or for subletting. Max LTV $60 \%$ (legislation).
Residential rental properties subsidised by the goverment. Max LTV $80 \%$ (legislation). LTVs above $80 \%$ can be granted against full government guarantee
Residential property owned and administered by the cooperative and used by the members of the cooperative. Max LTV $80 \%$ (legislation).
Residential property rented out to private tenants. Max LTV $80 \%$ (legislation).
fice propert tanufacturing buildings and warehouses for own use or for renting. Max LTV $60 \%$ (legislation).
roperty anty and retail buildings for own use or for rent. Max LTV $60 \%$ (legislation).
Property and land for agricultural use. Max LTV $70 \%$ (legislation). Lending from $60-70 \%$ LTV however only against additional collateral.
rerrty used for education, kindergardens, museums and other buildings for public use. Max LTV $70 \%$ (legislation).

These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denmark in 1982. All Danish index loans have semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the loan type. Especially the maturity for subsidized housing depends on the size of the future inflation rate.
The long-term - typically 30 -year - fixed-rate, callable loan is considered the most traditional Danish mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods.
raised. The interest rate is generally reset at a frequency of $1,3,5$ or 10 years, and the underlyis that interest rates are generally Iower than those of fixe replaced by new bonds. The yield of the new bonds determines the loa rate for the period until the next interest rate reset. The lower initial loan rate should therefore be weighed against the risk that it will increase during the loan term. An ARM may be prepaid at a price of 100 in connection with each interest rate reset. Alternatively, the borrower may prepay the loan by purchasing the bonds on market terms - as with all mortgage loans. This loan type is also offered with interest-only periods.

The loan rate is generally fixed for 3 or 6 months. In addition, this loan type differs from ARMs as the interest rate is linked to a reference rate, i.e. an interest rate determined in the money market. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average ), an interest rate IS is quoted daily by OMX NASDAQ. This loan type is also offered with interest-only periods.
hese are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank offered Rate) or CITA th possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan has a cap

## General practice in Danish market

Seasoning defined by duration of customer relationship, calculated from the first disbursement of a mortgage loan
